

THE BEST vaccine for your school buildings

Trusted, thorough and technically advanced

Want to reduce the risk of Covid –19 and other viruses to your pupils and staff when returning to your building in September?

Juniper’s reactive cleaning team have treated several schools since the pandemic started utilising world leading products from NordicChem and the best in market equipment from the USA. As well as being clinically proved to be effective against the Covid-19 (ISO 21702 90 efficacy against human coronavirus) the treatment will also kill a range of other common winter virulent viruses to reduce absences in school for pupils and staff and work hand in hand to enhance your corporate social responsibility programme.

What we do.....

Following our usual thorough summer cleaning programme, our trained and certified team will use the latest equipment and chemicals to achieve the most comprehensive surface hygiene programme available today ensuring all contact points in your building are treated continuing to kill a huge range of viruses for a minimum of 50 days. Once the coating has dried, it forms an invisible layer of “nanospikes” that penetrate and destroy cell membranes. Due to these “nanospikes”, our product’s process of elimination is mechanical instead of chemical in comparison with other long-term solutions. This is extremely effective in both high and low traffic areas. The active ingredient in the coating is ECHA (European Chemicals Agency) registered and compliant. The coating can be applied to and bonds with almost any surface – porous or non-porous, metal, leather, fabric etc.

We have a limited number of appointments available NOW with prices from £400 for primary schools and £900 for secondary schools. Please contact Albert Wreden our Head of Cleaning Operations for a more information, a no obligation quotation or to book a treatment on 07973 510793 or
